

People & Use Cases

Overdrive

Aventix
Epitech Paris
February 9, 2026

Summary

OverDrive – People & Use Cases

1- Context and vision of the project

- 1- General context
- 2- Identified problem
- 3- Vision of OverDrive
- 4- Value proposition
- 5- Ambition of the project

2- Definition of the target market

- 1- Reference market
- 2- Main target
- 3- Behaviors and uses
- 4- Market segmentation
- 5- Positioning of OverDrive on the market
- 6- Transition to personas

3- Definition of personas

- 1- What is a persona?
- 2- Methodology of construction of personas
- 3- OverDrive people
 - 1- Lucas, the analytical fan
 - 2- Emma, the curious spectator
 - 3- Julien, the technology enthusiast
- 4- Synthesis of personas

4- Introduction aux cas d'utilisation et à la logique du parcours utilisateur

- 1- Definition of a Use Case
- 2- Role of Use Cases in the OverDrive project
- 3- Global user journey logic
- 4- Adaptation of the courses to the personas
- 5- Transition to detailed Use Cases

5. Use Cases et parcours utilisateurs détaillés

- 1- Use Case 1 - Live the race in total immersion
- 2- Use Case 2 - Understanding running in a simple and guided way
- 3- Use Case 3 - Customize and sustain your experience
- 4- Summary of Use Cases

6. User storytelling and usage projection

- 1- Objective of storytelling in the OverDrive project
- 2- Scenario 1 - A race experienced as an analyst
- 3- Scenario 2 - A race made accessible and engaging
- 4- Scenario 3 - A personalized and sustainable experience
- 5- Emotional and experiential value
- 6- Transition to product and functional issues

7- Summary and product issues

- 1- Summary of identified user need
- 2- Consistency between market, personas and use cases
- 3- Product issues for OverDrive
- 4- Positioning of OverDrive as a product
- 5- Opening to the next stages of the project

1- Context and vision of the project

1- General context

Motorsport is one of the most popular sports disciplines in the world, supported by iconic competitions such as Formula 1, the World Endurance Championship (WEC) or the World Rally Championship (WRC). In recent years, motorsport consumption has changed significantly. Viewers are no longer satisfied with a simple TV stream: they follow the races via streaming platforms, use official applications, consult real-time statistics and interact on social networks during events. This evolution reflects a growing expectation of interactivity, understanding and personalization of the viewing experience.

However, despite this multiplication of media, the proposed experience remains mostly **linear and passive**. The essential information rankings, deviations, strategies, performance of the pilots are often scattered on several screens or interfaces, which fragments the viewer's attention. In addition, traditional broadcasting imposes a single point of view, decided by the director, leaving little freedom to the user to explore the race according to his own interests.

This situation creates a paradox: while motorsport generates a considerable amount of real-time data, the viewer exploits only a limited part of it, without real control of the information presented to him.

2- Problem identified

The analysis of current uses highlights several structural limitations of the experience of watching motorsport:

- An **essentially passive experience**, where the viewer undergoes the rhythm and point of view of the broadcast.
- A **growing complexity of strategies** (tires, energy, stops, weather) difficult to understand for occasional spectators.
- An information **overload for expert fans**, forced to juggle between several screens or applications.
- A **lack of customization**, while every spectator is not interested in the same drivers, teams or battles on the track.

These limitations directly impact public engagement, especially younger generations accustomed to interactive, immersive and adaptive digital experiences.

The identified need is therefore clear: to propose a solution capable of transforming the viewer into **an actor of his own experience**, while making motorsport more accessible, understandable and engaging.

3- Vision of OverDrive

OverDrive is an innovative response to these challenges. The project aims to rethink the way car racing is consumed, harnessing the potential of immersive and interactive technologies.

OverDrive's vision is to create a platform dedicated to motorsport, combining **augmented reality (AR), virtual reality (VR) and real-time data visualization**, in order to offer a fully customizable viewing experience.

Rather than just a simple broadcast, OverDrive offers an immersive environment in which the user can :

- Choosing one's perspective on the race,
- Organizing and manipulating the information that interests them,
- Understanding key strategies and events

The objective is not to replace traditional broadcasting, but to enrich it by offering an **intelligent experiential layer**, adapted to different profiles of spectators.

4- Value proposition

Immersion

Thanks to virtual and augmented reality, OverDrive immerses the user in the heart of the race. The immersive environment allows a strengthened sense of presence and a better understanding of the dynamics of the event.

Understanding

OverDrive transforms the complexity of motorsport into readable and educational information. The data is no longer suffered but contextualized, facilitating the understanding of strategies, deviations and decisions in the race.

Personalization

Each user can adapt their experience according to their preferences: choice of drivers tracked, type of data displayed, level of detail, organization of the virtual space. This personalization promotes engagement and loyalty.

5- Ambition of the project

OverDrive aims to become a reference in the way motorsport is consumed in the era of immersive technologies. The project is positioned on the border between **technological product, media platform and innovative user experience**.

Through OverDrive, motorsport is no longer only watched: it is explored, understood and lived.

2- Definition of the target market

1- Reference market

OverDrive is part of the digital sports entertainment market, and more specifically in the **motorsport segment**. This market brings together all the solutions allowing the dissemination, analysis and enrichment of the spectator experience around competitions such as Formula 1, the WEC, the WRC or others.

Today, the existing offer is mainly based on :

- Traditional television broadcasting,
- Official streaming platforms or partners,
- Mobile applications providing additional statistics, rankings and content.

These solutions meet a basic need to watch a race but still exploit little the possibilities offered by immersive and interactive technologies. The experience remains mostly downward, little customizable, and limited by the screen format.

OverDrive is positioned in an emerging segment with high added value: **the immersive enrichment of sports broadcasting**, relying on virtual reality, augmented reality and advanced data visualization.

2- Main target

OverDrive's main target is **motorsport spectators**, whether regular or casual, sharing an interest in racing and active consumption of digital content.

This target is characterized by :

- An age group mostly between **18 and 35 years**,
- A strong familiarity with digital tools and streaming platforms,
- Frequent use of the smartphone as a second screen during sporting events,
- A strong curiosity for new digital experiences.

These users are no longer just looking for content, but an **enriched experience**, able to adapt to their expectations, their level of knowledge and their degree of involvement in the discipline.

3- Behaviors and uses

The behavior analysis of this target highlights several key trends :

- Spectators follow the races **live or deferred**, depending on their constraints, but wish to retain access to the complete data of the event.

- They alternate between several sources of information: main broadcast, official applications, social networks, specialized sites.
- Part of the audience is already adopting a second screen logic, in order to consult rankings, deviations, strategies or on-board cameras.

These uses reveal an unmet need: centralize and organize information within a coherent, fluid and customizable experience.

4- Market segmentation

In order to design a relevant solution, OverDrive segments its market into several user profiles, differentiated by their level of engagement, their expectations and their relationship to technology.

Analytical enthusiasts

This segment brings together expert fans who regularly follow competitions. They are interested in the strategies, technical performance and details of the race. Their main expectation is access to rich, usable and customizable data.

Curious spectators

This segment corresponds to occasional spectators, attracted by major events or by the spectacular aspect of motorsport. They are primarily looking for an understandable, educational and accessible experience, without technical overload.

Technophiles and early adopters

This segment brings together users attracted by digital innovations and immersive experiences. They are sensitive to new forms of sport consumption and are a strategic target for the initial adoption of OverDrive.

This segmentation makes it possible to adapt the OverDrive experience to different levels of expertise and engagement, while maintaining a unique and coherent platform.

5- Positioning of OverDrive on the market

OverDrive is positioned as a **premium immersive platform**, complementary to existing distribution solutions. Its objective is not to compete directly with traditional broadcasters, but to offer a user-centric differentiation experience.

The positioning of OverDrive is based on :

- An approach focused on the spectator experience,
- Intelligent exploitation of racing data,

- Advanced customization of the interface and content,
- Enhanced immersion thanks to AR/VR technologies.

This positioning allows OverDrive to appeal to a wide audience, while offering strong added value to the most engaged users.

6- Transition to personas

The diversity of profiles present in the motorsport market makes the creation of **personas** essential. These user archetypes will make it possible to represent in a concrete way the expectations, frustrations and objectives of the different segments identified.

Personas will be the working basis for :

- The design of user journeys,
- The definition of key features,
- The UX and technical choices of the OverDrive project.

3- Definition of personas

1- What is a persona?

A persona is a **fictional but realistic character**, built from observations, market hypotheses and real user behaviors. It represents an **archetype of user** sharing similar goals, needs and frustrations.

Unlike a real user, the persona does not correspond to a single person, but to a **segment of the market**. It allows :

- Design user value-oriented features,
- Guide UX and technical decisions,
- Avoid designing a generic product or product focused only on technology.

As part of the OverDrive project, personas are a **strategic tool**: they ensure consistency between product vision, user journeys and functional choices.

2- Methodology for constructing personas

OverDrive personas have been defined from :

- The analysis of current uses of motorsport,
- The observation of the behavior of regular and occasional spectators,
- The identification of recurring frustrations related to existing solutions,
- The market segmentation presented above.

Each persona is described according to a homogeneous structure :

- General profile and context,
- Consumption habits,
- Frustrations and pain points,
- Objectives and expectations,
- Product opportunities for OverDrive.

This approach ensures that each persona is directly exploitable for the design of use cases and functional perimeter.

3- People from OverDrive

Persona 1 – Lucas, the analytical fan

General profile

Lucas is 24 years old and is an engineering student. He has been following motorsport for several years, especially Formula 1 and Endurance. He has a solid

technical foundation and is as interested in the performance of the drivers as in the strategies of the teams.

Consumption habits

Lucas watches most of the races live. During the broadcast, he often uses a second screen to consult :

- Real-time rankings,
- The differences between pilots,
- Information on tires and strategies.

Frustrations

- The information is fragmented between several platforms.
- It is difficult to follow several battles simultaneously on the track.
- The point of view imposed by the broadcast limits his analysis of the race.
- The experience remains passive despite the richness of available data.

Objectives

- Understand in-depth running strategies.
- Quickly access the data that interests him.
- Choose which drivers or teams to follow as a priority.
- Feel more involved in the course of the race.

Opportunities for OverDrive

OverDrive can meet Lucas' expectations by providing an immersive and highly customizable experience, allowing him to organize data in real time and adopt an active analyst posture rather than just a spectator.

Persona 2 – Emma, the curious spectator

General profile

Emma is 21 years old and is a student. She is interested in motorsport occasionally, mainly during major events or high-profile races. She appreciates the show, but does not master technical jargon or strategic subtleties.

Consumption habits

Emma watches the races on streaming platforms or on television, often on an occasional basis. She consults few statistics, because they seem complex or not very accessible to her.

Frustrations

- Technical vocabulary is difficult to understand.
- Racing strategies are not always clearly explained.
- She does not always understand why a driver gains or loses positions.
- She can quickly drop out when the race becomes too complex.

Objectives

- Simply understand what is happening on the track.
- Identify the key moments of the race.
- Appreciate the event more without excessive cognitive effort.
- Feel more emotionally involved.

Opportunities for OverDrive

OverDrive can make motorsport more accessible to Emma through educational visualizations, a simplified mode and contextualized explanations, promoting her engagement and loyalty.

Persona 3 – Julien, the technology enthusiast

General profile

Julien is 29 years old and is a young active person. He has been following motorsport for several years and is particularly interested in new technologies, including virtual reality and immersive experiences.

Consumption habits

Julien watches the races live or in replay and regularly tests new applications or platforms related to sports and entertainment. He is sensitive to the quality of the interface and the freedom of interaction offered.

Frustrations

- The viewing experience is too standardized.
- The lack of control over the interface limits immersion.
- Few solutions really exploit the potential of immersive technologies.

Objectives

- Live an innovative viewing experience.
- Fully customize your consultation environment.
- Explore a new way of consuming motorsport.

Opportunities for OverDrive

OverDrive can meet Julien's expectations by offering a configurable, scalable and technologically differentiating AR/VR environment, positioning the platform as a premium and innovative experience.

4- Synthèse des personas

The three personas defined as the analytical fan, the curious spectator and the technology enthusiast cover most of the profiles present on the market targeted by OverDrive. Together, they make it possible to design a solution:

- Both expert and accessible,

- Immersive without being exclusive,
- Customizable without being complex.

These personas will serve as a reference for the definition of use cases, user paths and the functional scope of the project.

4- Introduction to Use Cases and the logic of user journeys

1- Definition of a Use Case

A **use case** describes a situation of concrete use of the system from the user's point of view. It formalizes the interaction between a persona and the solution, in a given context, in order to achieve a precise objective.

Unlike a simple feature, a use case :

- Is part of a realistic scenario,
- Takes into account the context of use,
- Highlights the value brought to the user,
- Makes it possible to anticipate UX and technical constraints.

As part of the OverDrive project, use cases are a **bridge between personas and product design**. They make it possible to translate the identified needs and frustrations into coherent, measurable and usable user journeys.

2- Role of Use Cases in the OverDrive project

Use cases play a central role in the structuring of the OverDrive project for several reasons:

- They guide user experience design, particularly in complex environments like virtual and augmented reality.
- They facilitate the identification of essential features to include in an MVP.
- They serve as the basis for defining user stories and the product backlog.
- They enable the anticipation of interactions between the user, the interface, and real-time data.

In a project with a strong technological component, use cases avoid a purely technical approach by refocusing the design on real use.

3- Global user journey logic

The OverDrive experience is designed as a continuous journey, structured around the cycle of a motorsport event. This course is divided into three main phases:

Before the race

This phase corresponds to the preparation of the experiment. The user :

- launches the OverDrive application,

- selects the event he/she wants to follow,
- configures his/her environment (VR or companion application),
- chooses his/her level of detail and display preferences.

This step is essential to ensure a smooth and personalized experience from the beginning of the race.

During the race

This is the heart of the OverDrive experience. The user is immersed in the event and interacts in real time with :

- Race broadcasting,
- dynamic data (rankings, gaps, strategies),
- navigation and personalization tools.

Depending on his profile, the user can adopt an analytical, exploratory or pedagogical posture, without breaking experience.

After the race

Once the event is over, OverDrive extends the experience by offering :

- Access to final statistics,
- enhanced replays,
- reuse of saved configurations for future events.

This phase contributes to the loyalty and anchoring of the product in the regular use of the user.

4- Adapting the learning paths to the personas

One of the fundamental principles of OverDrive is the adaptability of the experience to different user profiles :

- For the **analytical fan**, the route emphasizes the density and accuracy of the data, as well as the freedom of navigation between pilots and battles.
- For the **curious spectator**, the course favors clarity, the prioritization of information and visual assistance.
- For the **technology enthusiast**, the journey enhances customization, immersion and exploration of advanced features.

The use cases detailed in the next section will concretely illustrate these journeys, by staging the specific interactions of each persona with OverDrive.

5- Transition to detailed Use Cases

This introduction sets out the methodological and conceptual framework of OverDrive use cases. The next section will detail several representative usage scenarios, each associated with a specific persona, to demonstrate the functional and experiential value of the solution.

Use Cases and detailed user journeys

This section presents the main scenarios for using OverDrive. Each use case is associated with an identified persona and describes a complete user journey, from the context of use to the value provided by the solution.

1- Use Case 1 – Experience the race in total immersion

Person concerned : Lucas, the analytical fan

Context : Race followed live from a virtual reality headset

User objective : Analyze the race in depth and follow several battles simultaneously

Trigger

Lucas launches OverDrive a few minutes before the start of a Grand Prix to prepare his viewing experience.

User journey

1. Lucas selects the current race from the home screen.
2. He enters an immersive virtual environment, a dedicated motorsport viewing space.
3. Around him, interactive panels and widgets display available information: standings, gaps, tire data, energy, and weather.
4. Lucas freely organizes these elements within the virtual space, according to his priorities.
5. During the race, he chooses to follow a specific driver or a particular battle, without losing access to the overall data.
6. In real time, he adjusts his display to adapt to the evolving race (pit stops, strategy changes, incidents).

Value provided by OverDrive

OverDrive transforms Lucas' experience by giving him total control over the information. It is no longer disseminated: it explores the race according to its own logic of analysis, strengthening its commitment and overall understanding.

2- Use Case 2 – Comprendre la course de manière simple et guidée

Person concerned : Emma, the curious spectator

Context: Simultaneous viewing of the race via the OverDrive app

objective: Understand the main issues without overloading information

Trigger

Emma launches OverDrive at the same time as the broadcast of a major race.

User journey

7. Emma selects the simplified mode offered by the application.
8. The interface displays only essential information: standings, main gaps, and key events.
9. When a strategic event occurs (pit stop, tire change, penalty), a clear and contextualized visualization appears.
10. Visual elements and educational indicators explain the impact of these events on the standings.
11. Emma can explore information in more detail if she wishes, but she is never required to do so.

Value provided by OverDrive

OverDrive makes the race accessible and understandable. Emma feels involved and able to follow the event without frustration, which promotes her long-term interest and loyalty.

3- Use Case 3 – Personalize and sustain your experience

Target persona: Julien, the technology enthusiast.

Context: Regular use of the platform in VR or AR.

User objective: To create a unique and reusable experience.

Trigger

Julien wants to prepare his viewing environment before the start of a new season.

User journey

12. Julien accesses OverDrive's advanced settings.
13. He configures his virtual workspace: data layout, visual themes, and level of detail.
14. He saves his layout and preferences.
15. OverDrive automatically loads this configuration for each new race.
16. Julien can adjust his environment on the fly or test new configurations.

Value provided by OverDrive

OverDrive becomes a personal and scalable tool. Customization reinforces the sense of ownership of the product and encourages regular and long-lasting use.

4- Summary of Use Cases

The use cases presented illustrate OverDrive's ability to :

- Adapting to different levels of expertise,
- offering consistent and complementary user journeys,

- transforming a passive experience into an active one.

They demonstrate that the platform is not only a technical solution, but a **product focused on use and user value**.

6- User storytelling and usage projection

1- Objective of storytelling in the OverDrive project

User storytelling makes it possible to give a concrete and human dimension to the OverDrive project. Where personas and use cases describe profiles and scenarios, storytelling stages the user's experience in a realistic context.

In a project with a strong technological component, this approach is essential for :

- Demonstrate the actual use value of the solution,
- Facilitate the projection of stakeholders,
- Illustrate the emotional and experiential impact of the product.

OverDrive is not limited to offering features: it aims to transform the way motorsport is experienced.

2- Scénario 1 – A race experienced as an analyst

Lucas moves into his home a few minutes before the start of a Grand Prix. He puts on his virtual reality headset and launches OverDrive. The immersive environment is set up: in front of him, the track; around him, the essential data of the race.

Even before the fires go out, Lucas has already organized his space. On the left, the real-time ranking; on the right, the differences between the drivers that he particularly follows; above, the information related to tires and strategy.

When the race begins, Lucas is no longer content to watch. He anticipates pit stops, observes deviation variations, compares strategies. He changes his focus according to the battles on the track, without ever losing sight of the overall vision of the race.

At the end of the event, Lucas has the feeling of having really understood the race. OverDrive allowed him to experience the event as an active observer, close to an engineer or a strategist.

3- Scénario 2 – Une course rendue accessible et engageante

Emma launches the broadcast of a race that she is particularly waiting for. At the same time, it opens OverDrive on its application. From the reception, she selects the simplified mode.

The interface is clear, readable, without overloading. When the first pit stops take place, OverDrive visually indicates the impact on the ranking. She understands why some pilots stand out ahead of others, without having to decipher a complex technical vocabulary.

As the race progresses, Emma feels more involved. She identifies key moments, understands strategic decisions and remains attentive to the checkered flag.

Thanks to OverDrive, the race is no longer intimidating. It becomes an understandable, engaging and pleasant event to follow.

4- Scénario 3 – A personalized and sustainable experience

Julien is preparing his evening race. It launches OverDrive and immediately finds its custom environment, configured during previous races.

The data he prefers are already in place, the visual themes correspond to his tastes, and the interface perfectly meets his expectations. During the race, he tests new layouts, adjusts certain settings, and saves an improved version of his space.

Over the course of events, OverDrive becomes for Julien a familiar tool, almost indispensable. The application adapts to it, evolves with its uses and strengthens its attachment to the platform.

5- Emotional and experiential value

Through these scenarios, OverDrive demonstrates its ability to generate a value that exceeds the simple functionality :

- a heightened sense of immersion,
- a sense of control over information,
- an **active relationship** with the sporting event,
- natural loyalty through personalization.

Le spectateur n'est plus un simple consommateur de contenu. Il devient acteur de son expérience.

6- Transition to product and functional issues

User storytelling highlights the consistency between the vision of OverDrive, the defined personas and the proposed use cases. It serves as a foundation for the rest of the project, including :

- The definition of the functional perimeter,
- The prioritization of functionalities (MVP),
- UX/UI and technical design.

7- Synthesis and product issues

1- Summary of identified user needs

Market analysis, the definition of personas and the formalization of use cases have identified clear and recurring needs among motorsport spectators.

These needs are structured around three major axes :

- **A need for immersion**, in order to strengthen the feeling of presence and closeness with the event.
- **A need for understanding**, given the growing complexity of strategies and race data.
- **A need for customization**, to adapt the experience to the expectations, level of expertise and interests of each user.

These needs are shared by varied profiles, but are expressed differently according to the degree of commitment and mastery of motorsport.

2- Consistency between market, personas and use cases

The work carried out demonstrates a strong coherence between :

- The **target market**, characterized by active and fragmented digital consumption,
- **Personas**, representing realistic and complementary user segments,
- **Use cases**, translating these profiles into concrete use scenarios.

Each persona calls for specific features, but all converge towards a unified product vision. OverDrive is not designed as a succession of independent modules, but as a platform capable of adapting its level of complexity and interaction according to the user.

This consistency is essential to ensure the readability of the product, both from the point of view of the end user and from that of future technical choices.

3- Product issues for OverDrive

Through this analysis, several structuring issues emerge for the development of OverDrive.

User experience issue

OverDrive must offer a smooth, intuitive and progressive experience, capable of adapting to both novice and expert enthusiasts. The interface and paths should avoid any cognitive overload, especially in immersive environments.

Technological issue

The platform will have to manage real-time data, offer consistent spatial interactions in AR/VR and guarantee sufficient performance to maintain immersion. Technical choices must be directly guided by the identified uses.

Adoption issue

To promote adoption, OverDrive will have to quickly demonstrate its value, especially with early adopters and enthusiasts. These users will play a key role in the dissemination and legitimization of the product.

Scalability Issue

The experience will have to be thought from the start to evolve: new competitions, new display modes, new features, without questioning the overall consistency of the product.

4- Positioning of OverDrive as a product

At the end of this analysis phase, OverDrive is clearly positioned as :

- An immersive new generation platform dedicated to motorsport,
- A **dissemination enrichment tool**, and not a simple dissemination channel,
- A product at the crossroads of media, data and user experience.

This positioning paves the way for future developments, both functionally and technologically, while maintaining a clear and differentiating value proposition.

5- Opening to the next stages of the project

This synthesis marks the end of the user understanding and conceptual framing phase. It forms the basis of the next steps of the OverDrive project, including :

- defining the functional scope and MVP,
- prioritizing features using a structured method,
- designing UX/UI interfaces,
- defining the technical architecture.

The decisions made during these steps will have to be aligned with the needs and user journeys defined in this document.
